

Dear Boarding Client,

Pet Country Spa is unique in that it offers boarding, training, grooming, breed selection consultation, special types of therapy, and complete medical and surgical services.

Our goal for boarders is to offer owners options on daily and overnight boarding for fun and lots of room to exercise. It is important that we have good communication with owners about directions and care for their pets. We need concise records of previous services, including vaccinations, heartworm test, and other worm checks. Also, for the best protection of all dog boarders, in addition to annual vaccinations, six-month worm checks and bordetella (kennel cough) need to be done. (Worms may encyst in the body of dogs from previous exposure, hatch out of the cyst at anytime and migrate to the intestinal tract, producing eggs passed in the feces.) Monthly use of flea control and heartworm prevention is also necessary. Any animal with contagious diseases will be treated and placed in isolated areas.

Puppies do not become adults immunologically until 6 months old. Therefore, vaccination series are not completed until the final parvo at 6 months old. We have a handout to help explain the puppy vaccinations.

I will be glad to talk to owners about special medications, health issues, and treatments. (example: insulin injections for diabetics)

Thanks,

A handwritten signature in black ink that reads "Dr. Bill Sanders". The signature is written in a cursive, flowing style with a long horizontal stroke at the end.
